

# Technical Approaches to Characterizing and Cleaning up Brownfields Sites:Pulp and Paper Mills

## Site Profile

6/04/02

Technology Transfer and Support Division  
National Risk Management Research  
Laboratory  
Office of Research and Development  
U.S. Environmental Protection Agency  
Cincinnati, OH 45268

## **Notice**

The U.S. Environmental Protection Agency through its Office of Research and Development funded and managed the research described here under Contract No. 68-C7-0011 to Science Applications International Corporation (SAIC). It has been subjected to the Agency's peer and administrative review and has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

## **Foreword**

The U.S. Environmental Protection Agency is charged by Congress with protecting the Nation's land, air, and water resources. Under a mandate of national environmental laws, the Agency strives to formulate and implement actions leading to a compatible balance between human activities and the ability of natural systems to support and nurture life. To meet this mandate, EPA's research program is providing data and technical support for solving environmental problems today and building a science knowledge base necessary to manage our ecological resources wisely, understand how pollutants affect our health, and prevent or reduce risks in the future.

The National Risk Management Research Laboratory is the Agency's center for investigation of technological and management approaches for reducing risks from threats to human health and the environment. The focus of the Laboratory's research program is on methods for the prevention and control of pollution to air, land, water, and subsurface resources; protection of water quality in public water systems, remediation of contaminated sites and groundwater; and prevention and control of indoor air pollution. The goal of this research is to catalyze development and implementation of innovative, cost-effective environmental technologies; develop scientific and engineering information needed by EPA to support regulatory and policy decisions; and provide technical support and information transfer to ensure effective implementation of environmental regulations and strategies.

This publication has been produced as part of the Laboratory's strategic long-term research plan. It is published and made available by EPA's Office of Research and Development to assist the user community and to link researchers with their clients.

E. Timothy Oppelt, Director  
National Risk Management Research Laboratory

## **Acknowledgments**

This document was prepared by Science Applications International Corporation (SAIC) for the U.S. Environmental Protection Agency's National Risk Management Research Laboratory Technology Transfer and Support Division (TTSD) in the Office of Research and Development. Susan Schock of TTSD served as Work Assignment Manager. Tena Meadows O'Rear served as SAIC's Project Manager. Participating in this effort were Arvin Wu, Joel Wolf, Adam Lynch, and Karyn Sper. Reviewers of this document include Margaret Aycock of the Gulf Coast Hazardous Substance Research Center at Lamar University, Jan Brodmerkl of the US Army Corps of Engineers in Wilmington, North Carolina, and the Association of State and Territorial Waste Management Officials (ASTWMO).

Appreciation is given to EPA's Office of Special Programs for guidance on the Brownfields Initiative.
